

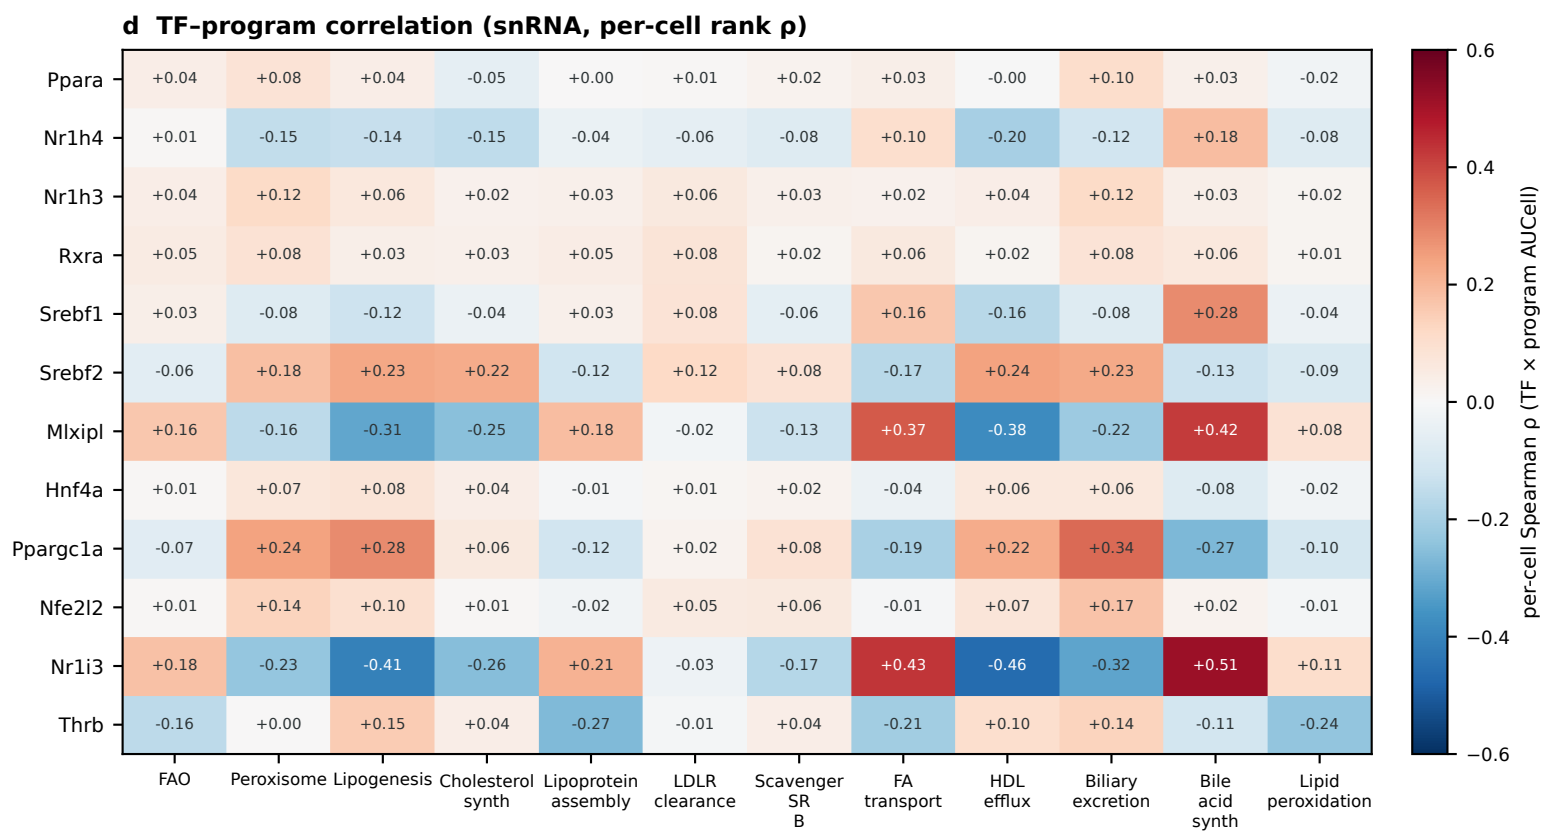

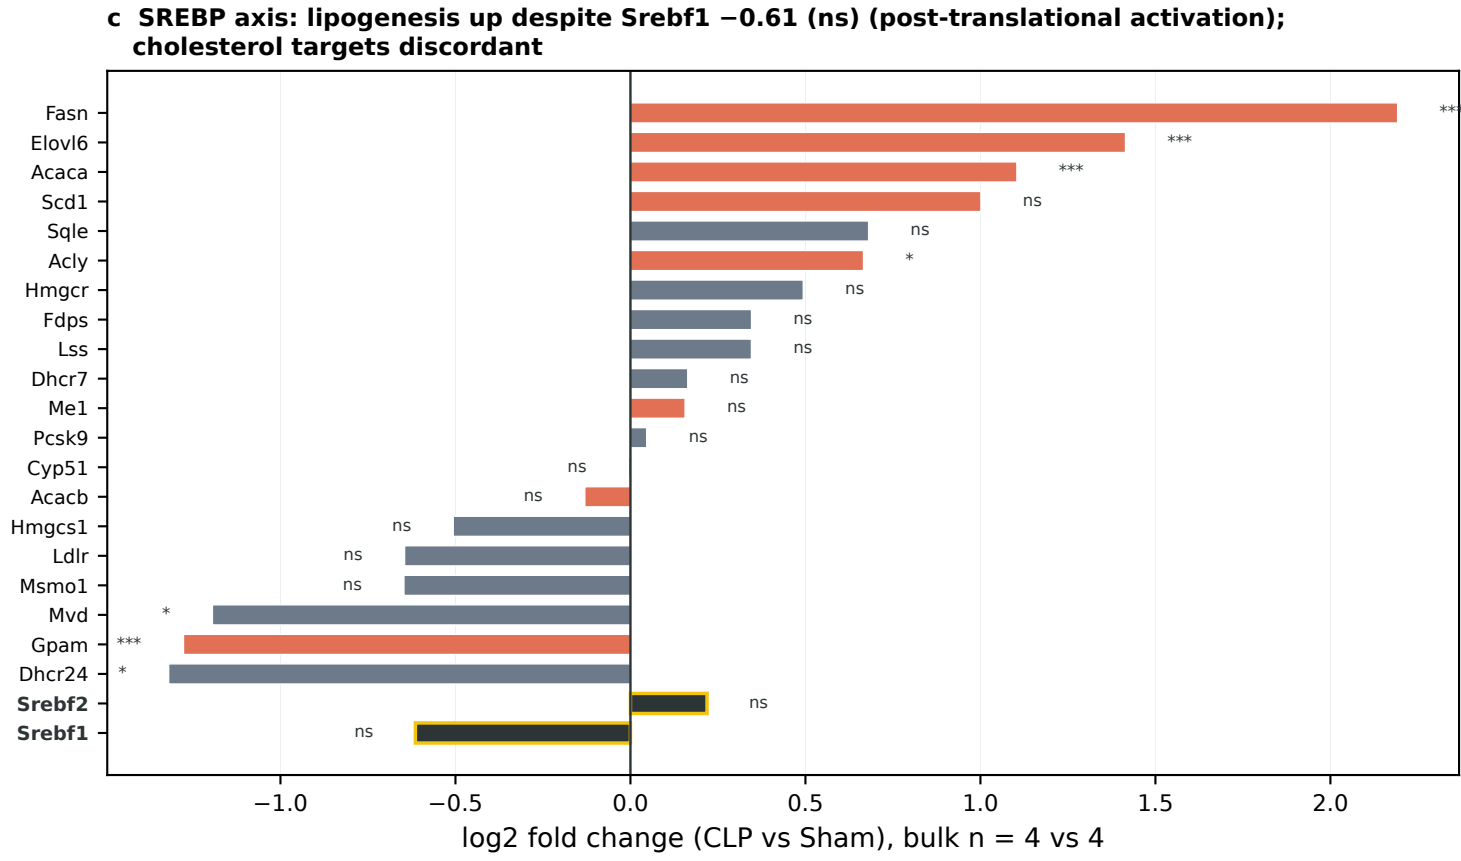

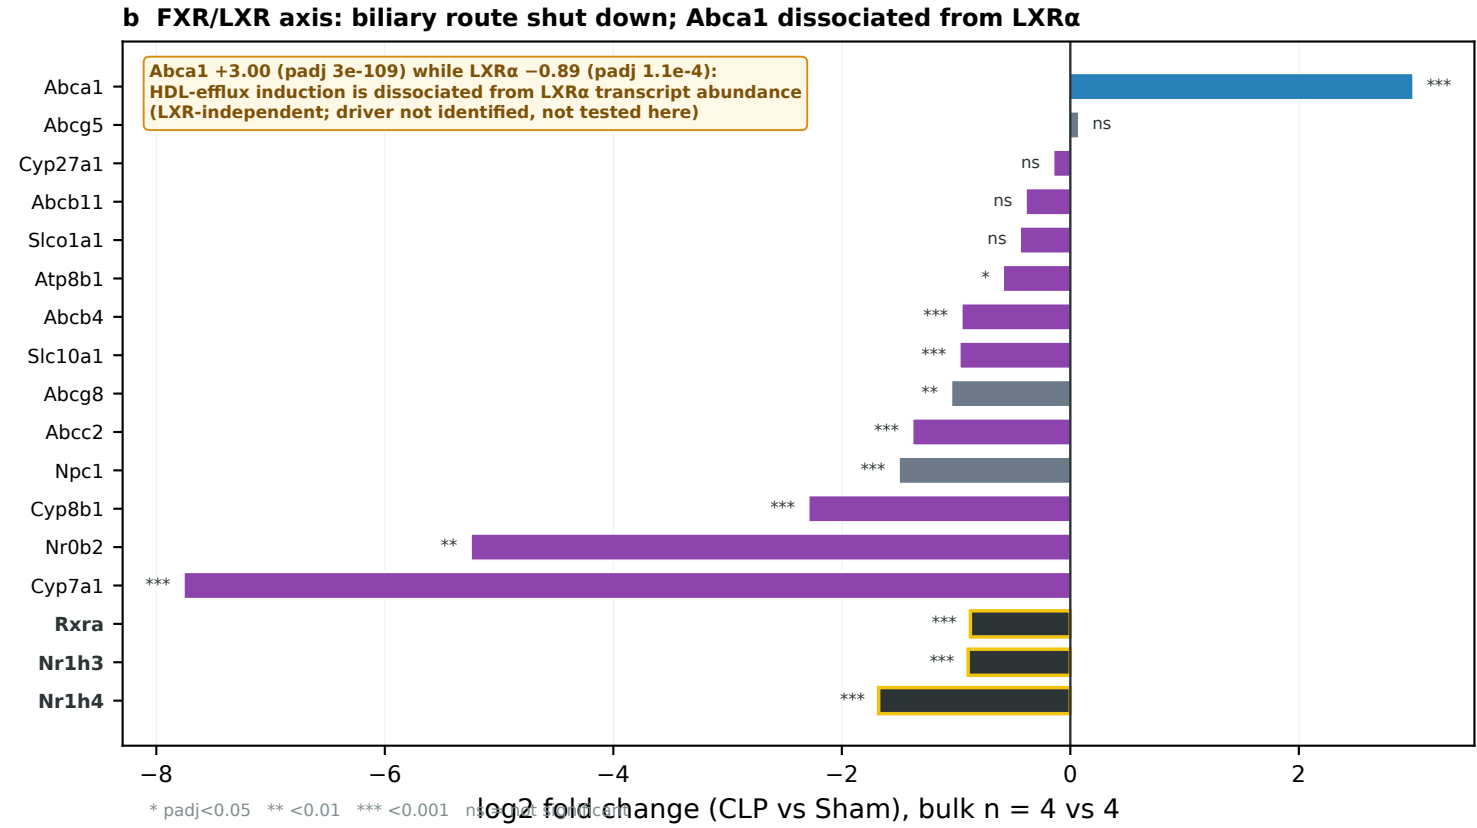

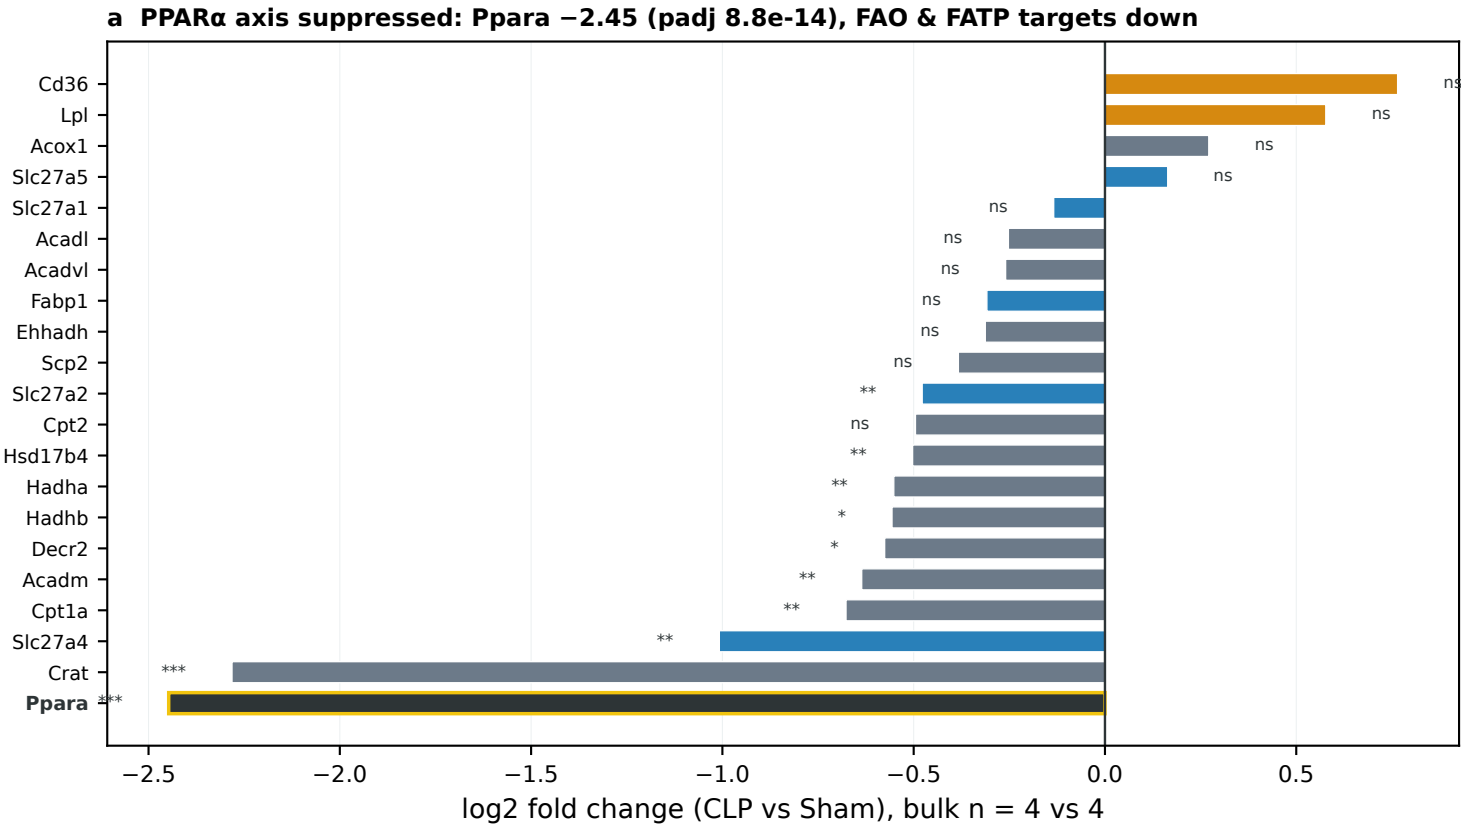

Figure 4 Upstream transcription-factor rewiring links the two reprogramming axes
Nuclear receptors (Ppara / Nr1h4-FXR / Nr1h3-LXRα / Rxra) are globally suppressed, while ABCA1 induction is dissociated from LXRα transcript abundance

■ nuclear receptor / TF ■ LXR target → HDL / FATP ■ SREBP-1c targets (lipogenic)
■ FXR targets (biliary) ■ FAO / cholesterol / LXR→bile ■ inflammatory (uncoupled)
